I had a dream and brought it to life last weekend. Its a Mini laydown Kustom Cabinet able to handle the K200's. I've got white screen for the speaker grill and red sparkle naugahyde to do the Frankie Head for it and when its complete I'll get more pics of it added. Its got a black grill till then. I built it last week end and didn't know how the tens were going to work. I have an Altec 421A just in case it didn't work out so she's built just big enough for a single 15. The Eminence Copper Heads sound great so I may stay with them. Check out the pics so far in the link below. Steve C
