I cannot easily read any of the postings on this board.

The light gray background doesn't contrast enough with the white text. I've not been able to locate the appearance controls to alter this. Is there tutorial or quick instruction for changing text color or background color? See attached screen shot.

We had to upgrade the site software a few weeks ago, it's unclear why but the custom site templates worked then and now have stopped working. I've switched to a default template for now and will have to repair the site-specific template in the coming weeks.
