---

i get really overwhelmed by working on amps. but i've got a problem with my PA and i need to fix it before tour and i've got very little cash...

so it looks like i need to figure this out.

i've got an early '70s tuck 'n roll. it was working fine then started getting really static for a while. now it won't turn on at all. i'm not sure if the problems are related or not. any suggestions...

thanks, i appreciate it.
