Currently looking for a pair of the fasteners used to attach the chrome legs to a Kustom 100 PA head. I could also use any information pertaining to these that might help in my search.

Also looking for the cross pipe that attaches the two leg sections.

Lee

If I remmeber right the threads on the amp head are 3/8"-16, or course threaded. If that is so than what you need is called a fulted knob, and can be found in the McMASTER CARR catalog on page 2862, at least in my catalog which is catalog 108.

Could it be 5/8-11? Anyone else here know about these fluted knobs?
