Hi all. I have purchased a pair of Kustom K 2-12H speakers and the matching K 2-10mon monitors. Can anyone please tell me any info on these speakers. Specifically, I am looking to find out the wattage on these. There is nothing on the cabinets to indicate what they can handle. Any info would be appreciated.

Its probobly safe to say that they could handle 50 watts RMS each cabinet due to the fact that other then alinco magnet type guitar speakers manufactures just do not make drivers these days that handle less than 50 watts.
