Does anyone out here in kustomland know someone who could repair and modify my k200 amp with reverb and tremelo and it has the right side with just the 4 knobs...I want to add a harmonic clipper to this amp somehow....A guy put in a Fuzzit (??) channel that almost works but it is close but no cigar ...any help would be appreciated ...thanks

Hi, Putting one in is easy, getting the right side preamp/harmonic clipper board and the coresponding plexiglass faceplate and knobs is another story.You will probably have to search out a head with a blown output section that someone does not want to repair to get the clipper board. The circuit board number you are looking for is PC403. May the force be with you!Let us know how you make out.

In that case adding it is easy, its all of 3 wires to be unsolder from the current board for the channel, and then resolder onto the clipper board, drilling the holes in your face plate ( the holes are already there in the chassie) for the added controls and foot switch jack and put the knobs on and your done!
