Here is a simple way to get a direct output on the smaller sc kustoms and the 100's. From the + output jack solder a 100K ohm resistor in series with a 6.8K ohm resistor to ground. Take a tap between the two resistors and that is your direct out for feeding slave amps, pa, or recording. I used this arrangement when I played a kustom challenger with a powered 410 kasino 100 watt cabinet. The head of kustom's service department gave me the tip years ago and I just ran across it, looking over the challenger schematic. Works great. half watt resistors were recommended. Don
