Kasino Concert ss# 4906

trying to figure out why the foot switch has been disconnected and there is no reverb tank if that is what you call it

i have a old Peavey Tank and,

wondering if i can mount it in side the box and plug it in to the rca jacks

next up it death CAP ????

i took off the old 2 prong cord but did not ground the 3rd leg yet my concern is so called death cap witch im awair of a shocking experience ....

im not a electrician by any means but my dad and i did repair TV built Heath Kits ..

so i do have some knolage but dont remember all the components

i took it all apart cleaned all the pots plugged in a 4x12 cab with my guitar and this thing sound awesome

i all so need to know the correct Ohms for the speaker and any wiring pattern or filters that may be needed

im going to build my own cab this is going on in my camper this summer to jam with

thank you all

chevytruckm@gmail.com

not sure if im suppose to leave my email but here it is

Hello and welcome.

No one is asleep here, it's just that at the moment I am the only moderator on this site and new members have to make 5 post that I must approve before post that they make just go right up to the board.

This stops spammers in the tracks!

Your amp is looking for a 8 ohm load to produce its full 50 watts or clean power, a higher load will cut the output in half and a 4 ohm load will potentially over heat the amp and cause a shut down if played loud enough.

If I recall right the cap ( death cap ) you need to cut out is off of the on/ off switch.

Once you do that then you simply bolt down to the chassis somewhere the green ground wire from a new power cable.

Next question Reverb tank

any one got a picture of what it's suppose to look like can i modify a old tank from a 400 peevy pa its prity long id half to cut it in 1/4 lol

not realy sure what they use on these Kasino

there are to RCA jacks hard mounted in side this on the bord but some one must of takin the tank out if it has one like a Peavey

i gueee i might be looking for parts

thank you

The reverb tank in these amps was a regular 14" long one.

I hung off of two aluminum tubes the spand the front and rear of the amp.

I Peavey tank even though it may be from a SS amp will not work right.

Later this evening I will look up what reverb tank you need.

The best way to date a amps birthday is by the numbers on the power transformer, or by looking at the CTS brand pots used in these amps they will have a 4 digit date code that starts with 137-\_\_ \_\_ \_\_, for example 4569 would mean that the amp was made on the 45th week of 1969.

I made a mistake before, your amp is a 100 watt rms amp and wants a 4 ohm load to do that.

I sent you a email with a photo of what the reverb tank and mounting brackets look like.
