Hi, my Kustom III Lead head is dead and I was very happy to stumble upon this great forum while I was searching the internet for info.

I understand that all schematics are to be found under the Technical Section of this site but it seems to be unavailable.  
Is there any news on this tech section, or is there someone who can send me the right schematic?  
SN = K-126862.

Many thanks!

Musicparts.com has the schematic for 20 bucks. They email it right to you.  
There are 3 different versions of that amp so make sure you have the info they will ask for.
