Hi guys, thought I would check again to see if anyone had the schematics for the PC5035 or PC5036 board for the K150-6 bass amp. Either schematic would do. Have been trying to interface a separate power amp into the chassis to replace the original which was missing when I bought the amp. Have found both preamp boards in the amp have a .2 to .3 DC offset on their output signal line. Would like to go thru the board and see if I can get this closer to zero. I would appreciate it if someone had one of these preamp schematics and could email me a copy.

Thanks

Joe Treiber

Thanks every one, Don has sent me the schematic I needed.
Now on to fix or rebuild the boards.

Thanks Don
