Hello!

Any schematics you look at on this site that show a transformer before the 4 output Transistors is a schematic for the K200 model that was made before yours, yours is a 200a model but our site info here is headed wrong.

The transformer by the way is a old school combination driver and phase splitter.

I am away from home this weekend and don't have much time to help you out , but maybe Bill will have time to do so?

If not I will help you on Monday.

I have all the right k200A schematics at home that I can fax, or mail you copy's of.

Don't fret , we will help you get it back up and running like a charm!
