---

I'm looking to buy a K200A-3 or K200A-4 in working condition and without major external flaws. My first choice would be a blue sparkle K200A-3, but I'm open to suggestions. Minor problems with the electronics (oxide, dead channel/feature, hum or similar) is acceptable.

Kind regards,  
Fredrik

What is the voltage in Sweden? I know finding the A series is a bit difficult to find here in the States. Just wondering about voltages.

We have 230 V and 50 Hz over here. (It used to be 220 V but this changed maybe 15 years ago.)

Thanks for bringing this issue up, but a transformer swap is no problem for me. I've only seen 70:s models over here, which makes me believe that there wasn't an official distributor back in the 60:s, so I factor in a modification (or if I'm lucky to find a unit too nice to be modded, an external transformer).
