I just picked up this amp. It already has a 3prong cord. Opened it up and kinda a shoddy job of installing it. They took the fuse out on the front panel and replaced it with the kind that you can remove the fuse by twisting the case. I want to put it back to close as it was. I have the parts and just checking what the fuse value should be. Thanks

In the technical /. Schematic section of this site you will find that they call for a 3 amp fast blow fuse.
