Hello,

first posting here.

I'm trying to bring a Studio 4V back to life.
Some tried to convert to EL34 and some magic smoke happened.
Chopped the combo to a headshell and painted it black.

Does anyone could supply me a schematic and maybe a connector diagramm?

It looks somewhat easy but there are modifications I want to revert back to stock
and maybe some butchering caused the trouble.

Thanks in advance and
greetings from germany
