That is a dual op amp chip, Kustom part number 007-7015-00. The generic number is uA739 or RC4739. It hasn't been made in many years.

The board can be modified to accept a modern 8 pin chip or you can try and find a used or a new old stock one.

Is the one in your amp dead or are you just looking for backups?

star electronics (877-240-8595) shows some NTE725 in stock which is a drop in replacement! Do yourself a favor and install a 14 pin socket on the board you are working on!
