Looking for any info on a 67? (based on your sn# chart), 4 channel PA Head model #1145PA I aquired about 20 years ago played through awhile and stashed. I ran accoss it again and found this site (great site by the way!) I didn't see any info on the site for this model and was wondering if anyone knew the spec's for it and what the extra jacks on the back are for. 2 1/4" went to speakers but there is an rca I'm assuming went to a mixer? and another 1/4" jack I'm not sure of? Any info would be appreciated.
